编译型语言与解释性语言的区别

C语言
C++
Fortran

Python
JavaScript
MATLAB
SHELL

SISSO源代码已有，需要安装**编译器**

[1.2 编译型语言和解释型语言的区别 - 赛兔子 - 博客园](#)

[编译型语言和解释型语言的区别 如何保存解释型语言结果 -CSDN博客](#)

2. Installation

A FORTRAN MPI compiler is required to compile the SISSO parallel program. Below are two options for compiling the program using an Intel MPI compiler (other compilers may work as well but the Intel compilers are recommended). Download and unzip the package in Linux operating systems, and then go to the folder 'src' and do:

```
1) mpiifort -fp-model precise var_global.f90 libsisso.f90 DI.f90 FC.f90 SISSO.f90 -o  
~/bin/SISSO
```

or

```
2) mpiifort -O2 var_global.f90 libsisso.f90 DI.f90 FC.f90 SISSO.f90 -o ~/bin/SISSO
```

The option (1) enables better accuracy and run-to-run reproducibility of floating-point calculations; option (2) is about 2X faster than (1) but tiny run-to-run variations may happen between processors of different types, e.g. Intel and AMD.

If 'mpi' related errors present during the compilation, try opening the file 'var_global.f90' and replace the line "use mpi" with "include 'mpif.h'". However, "use mpi" is strongly encouraged (see <https://www.mpi-forum.org/docs/mpi-3.1/mpi31-report/node411.htm>).

Fortran MPI 编译器mpiifort 安装

- Intel mpiifort编译器集成在[Intel oneAPI HPC Toolkit](#)中
- 文件名
 - I_HPCKit_p_2024.2.1.79_offline.sh
- 安装命令
 - `sudo chmod +x I_HPCKit_p_2024.2.1.79_offline.sh` (给予文件运行权限)
 - `sh I_HPCKit_p_2024.2.1.79_offline.sh`
- 选择Intel MPI Library 以及 Intel Fortran Compiler安装
- 加载intel oneapi环境
 - `source ~/intel/oneapi/setvars.sh --force`
 - 可加入~/.bashrc

```
cjw@cjw-VMware-Virtual-Platform:~$ source ~/intel/oneapi/setvars.sh --force

:: initializing oneAPI environment ...
  bash: BASH_VERSION = 5.2.21(1)-release
  args: Using "$@" for setvars.sh arguments: --force
:: compiler -- latest
:: debugger -- latest
:: dev-utilities -- latest
:: dpl -- latest
:: mpi -- latest
:: tbb -- latest
:: oneAPI environment initialized ::
```

- GCC (GNU 编译器集合) 是一个开源的编译器工具集, 支持多种编程语言的编译, 包括 C、C++、Fortran、Ada 等。GCC 是 Linux 和许多其他操作系统中最常用的编译器之一, 广泛应用于软件开发和系统编程中。

- 安装指令

- `sudo apt install gcc`

- 服务器上离线安装gcc

- [linux下离线安装gcc详细教程_linux离线安装gcc-CSDN博客](#)

确定安装完成

- `gcc -v`

```
code@ubuntu:~/Virtual-Platform$ gcc -v
Using built-in specs.
COLLECT_GCC=gcc
COLLECT_LTO_WRAPPER=/usr/libexec/gcc/x86_64-linux-gnu/13/lto-wrapper
OFFLOAD_TARGET_NAMES=nvptx-none;amdcn;amhsa
OFFLOAD_TARGET_DEFAULT=1
Target: x86_64-linux-gnu
Configured with: ../src/configure -v --with-pkgversion='Ubuntu 13.2.0-23ubuntu4' --with-bugurl=file:///usr/share/doc/gcc-13/README.Bugs --enable-languages=c,ada,c++,go,d,fortran,objc,obj-c++,n2 --prefix=/usr --with-gcc-major-version-only --program-suffix=-13 --program-prefix=x86_64-linux-gnu- --enable-shared --enable-linker-build-id --libexecdir=/usr/libexec --with-host-included-gettext --enable-threads=posix --libdir=/usr/lib --enable-nls --enable-cloexec-gnu --enable-libstdc++-debug --enable-libstdc++-timezones --with-default-libstdc++-abi=new --enable-libstdc++-backtrace --enable-gnu-unique-object --disable-vtable-verify --enable-plugin --enable-default-pie --with-system-zlib --enable-libbphobos-checking=release --with-target-system-zlib=auto --enable-objc-gc=auto --enable-multilarch --disable-werror --enable-cet --with-arch=32i686 --with-abi=m64 --with-multilib-list=m32,m64,m32 --enable-multilib --with-tune=generic --enable-offload-targets=nvptx-none;build/gcc-13-u7kn6/gcc-13-13.2.0/debian/tnp-nvptx/usr,amdcn;amhsa/build/gcc-13-u7kn6/gcc-13-13.2.0/debian/tnp-gcn/usr --enable-elfload-defaulted --without-cuda-driver --enable-checking=release --build=x86_64-linux-gnu --host=x86_64-linux-gnu --target=x86_64-linux-gnu
Thread model: posix
Supported LTO compression algorithms: zlib zstd
gcc version 13.2.0 (Ubuntu 13.2.0-23ubuntu4)
```

● 编译SISSO软件

- 安装rar压缩包解压文件
 - `sudo apt install unrar`
 - `unrar x SISSO.rar`
- 进入SISSO/src文件夹下 (在oneapi环境下)
 - 运行
 - 创建文件夹: `mkdir ~/bin`
 - `mpiifort -fp-model precise var_global.f90 libsisso.f90 DI.f90 FC.f90 SISSO.f90 -o ~/bin/SISSO`
 - 完成SISSO编译

● 将SISSO加入系统环境变量

- 将路径加入系统环境变量后可在Linux系统中任意位置执行该路径下的可执行文件
- `vim ~/.bashrc`
 - `export PATH=~/.bin:$PATH`
- `source ~/.bashrc`
- 在任意位置输入SISSO即可运行程序

● SISSO的使用

- train.dat文件结构
- SISSO.in 配置文件
- 详见SISSO_Guide.pdf

- 单核运行
 - $\text{SISSO} > \log$
- 多核运行
 - `mpirun -np [number_of_cores] SISSO > log`
 - `[number_of_cores] = 2 | 4 | 24 | 48 .....`

Nitrogen reduction reaction energy and pathways in metal-zeolites: deep learning and explainable machine learning with local acidity and hydrogen bonding features†

Yuming Gu,† Qin Zhu,† Ziteng Liu,† Cheng Fu, Jiayue Wu, Qiang Zhu, Qingqing Jia and Jing Ma*

3 SISSO features

$$SISSO1 = e^{\frac{N_H}{N_N}} + e^{PLD \cdot \Delta Q_{CT}}$$

$$SISSO2 = \frac{d_{MN}^2}{e^{N_N} + e^{N_H}} e^{\Delta Q_{CT}}$$

$$SISSO3 = \frac{\lg N_N}{N_N} N_{HB} + \frac{\lg PLD}{e^{LA}}$$

e.g., NH₂* (Ti-zeolite)

$$\begin{aligned} \Delta E^{SISSO} &= -0.1272 \cdot SISSO1 + 4.3625 \cdot SISSO2 + 1.5625 \cdot SISSO3 - 4.8158 \\ &= (-1.0537 + 4.7030 + 0.9130 - 4.8158) \text{ eV} \\ &= -3.47 \text{ eV (SISSO)} \end{aligned}$$

$$\Delta E^{DFT} = -3.71 \text{ eV (DFT)}$$
